

Self reflection

IMDP - Interactive Media Design & Prototyping

Semester 1404 - 13th of November 2014 (Due date)

Teacher: Ryan Cole

Student: Jan Dočekal

I was glad I could go and take a previously “developed” idea and push it into a functional state. The given time in my opinion was too short, I would gladly work on this for a longer time, since I would be able to add more functions to it.

I think this was actually quite a nice challenge for me, since I never used json, or loops much, so it was a cool new experience, and I think I adapted to it quite quickly and successfully.

I'm satisfied with the final “product” I think it's really cool, I'm only sad that I wasn't able to come up with a more “profound” way of saving the final image, than print. But that would require a much longer time for the project.

I really enjoyed the class, I generally enjoy programming and coding very much, so it was really cool to do it in school. I think Ryan is a great teacher, and I learned quite a couple of things during this project, and I'm very thankful for that. (Node.js here I come!)
